BM2700 MODULAR CLEANING MACHINE

BM2700 Modular Cleaning Machine

The Function of The Machine;

This machine collects WET MOSSES on the point where the sea meets the sand within the close sea (it enters the water of 50 cm in depth), completely separate the beach sand and mosses (in the sea, on the beach) and, collects mosses and litters (on the land). With the help of the nails with pointed springs on the endless belt, it picks mosses and litters and, stored them in the waste container in back of the machine.

Important ;

The most important and distinguishing feature of our machine; Machines of other brands do not discharge the collected garbage into the garbage transfer machine, they do so onto the ground. But due to its special design, our machine discharges directly into the garbage transfer vehicle. With this unique feature, it is not necessary to use a secondary labor or process to discharge the garbage, which has been collected from the ground, into the garbage transfer vehicle. Our machine therefore allows significant savings in terms of time, labor, processing and fuel.

Machine's Technical Features

- Dimensions (length: 580 cm, width: 250 cm, height: 230 cm)
- Cleaning Width (160 cm) • Weight (1750 kg)
- Garbage Container Volume (1.35 m3)
- Garbage Container Unloading Height (225 cm)
- Hydraulic Oil Tank (40 liters)
- Tire Size (31 – 15.50 – 15)
- Cleaning Speed (0– 100 mt/min– depending on the beach conditions)

Important Note: This machine is pulled by a tractor with four-wheel driving system of 85 HP and over.
