BM2700 ALGAE AND DEBRİS REMOVAL MACHİNE

BM 2700 ALGAE AND DEBRİS REMOVAL MACHİNE

Function of the Machine ;

It collects wet seaweed found in the shallows (entering water 80 cm deep), at the point where the sea meets the sand, and within the sand on the beach. It completely separates the seaweed and debris from the sand, leaving only the sand. It catches moss and debris using sharp, spring-loaded tines on an endless belt and stores them in the waste hopper at the rear of the machine.

Important ;

The most important and distinguishing feature of our machine; Machines of other brands do not discharge the collected garbage into the garbage transfer machine, they do so onto the ground. But due to its special design, our machine discharges directly into the garbage transfer vehicle. With this unique feature, it is not necessary to use a secondary labor or process to discharge the garbage, which has been collected from the ground, into the garbage transfer vehicle. Our machine therefore allows significant savings in terms of time, labor, processing and fuel.

Machine’s Technical Features

- Dimensions (length: 580 cm, width: 250 cm, height: 230 cm)
- Cleaning Width (160 cm)
- Weight (1750 kg)
- Garbage Container Volume (1.55 m^3)
- Garbage Container Unloading Height (225 cm)
- Hydraulic Oil Tank (65 liters)
- Tire Size (11.50 30 – 80 – 15.30)
- Cleaning Capacity (0 – 1600 m^2/hour – depending on beach conditions)
- Minimum tractor power (65 – HP)

CE UYGUNLUK DEKLARASYONU

Firmamız,

BATMAN MAKİNA
SEZAİ BATMAN

Üretim faaliyetlerini aşağıdaki adresde sürdürmektedir.
Mimarsinan Mah. Salhane Cad. No:2/C Silivri/ İstanbul
