BM3700 BEACH CLEANİNG MACHİNE DRİVEN BY TRACTOR

BM 3700 BEACH CLEANİNG MACHİNE DRİVEN BY TRACTOR

Function of the Machine ;

It cleans all the undesired foreign matters inside the sand such as sea shells, mussels, mosses, sticks and tree pieces, glass, metal pieces, medical waste, packaging waste, droppings, cigarette stubs, plastic bottles etc. inside the beach sand and, airs out the sand it has cleaned to avoid the formation of mushroom. It lays the sand it has cleaned and screened on the ground and, straightens the surface with a decorative template. It collects the waste and undesired matters into the garbage container. It makes the beach a place where you may safely walk with your bare feet.

Important ;

The most important and distinguishing feature of our machine;Machines of other brands do not discharge the collected garbage into the garbage transfer machine, they do so onto the ground.But due to its special design, our machine discharges directly into the garbage transfer vehicle. With this unique feature, it is not necessary to use a secondary labor or process to discharge the garbage, which has been collected from the ground, into the garbage transfer vehicle. Our machine therefore allows significant savings in terms of time, labor, processing and fuel.

Machine's Technical Features

- Dimensions (length: 500 cm, width: 223 cm, height: 210 cm)
- Cleaning Width (170 cm)
- Beach Cleaning Depth (25-30 cm)
- Weight (1500 kg)
- Garbage Container Volume (1.4 m^3)
- Garbage Container Unloading Height (225 cm)
- Hydraulic Oil Tank (65 liters)
- Tire Size (11.50 30 – 80 – 15.30)
- Cleaning Capacity (0 – 15,200 m^2/hour – depending on beach conditions)
- Minimum tractor power (65 – HP)
